The article considers the current state of development of health insurance in the context of the Covid-19 pandemic. The statistics of coronavirus prevalence and the cost of assistance in combating the pandemic in different countries of the world have been studied. The insurance programs of domestic insurance companies in case of coronavirus infection are considered. An algorithm for providing insurance protection by insurance companies in case of coronavirus in Ukraine has been developed. The positive aspects of concluding health insurance contracts against coronavirus for the population and the economy of Ukraine as a relevant type of insurance are identified.

The aim of the study. The aim of the article is to identify current aspects of the development of health insurance in Ukraine in the conditions of COVID-19 and to develop an algorithm for providing insurance protection by insurers in case of coronavirus.

Devices, materials and research methods. Analysis, comparison, synthesis, systematization, system analysis, logical method, statistical analysis and generalization of data, methods of financial analysis, data processing.

Research results. The article examines the development of health insurance under COVID-19. The statistics of coronavirus prevalence and the costs of assistance in the fight against coronavirus in different countries of the world have been studied. According to the results of the research, the current programs of providing medical insurance against coronavirus of various insurance companies of Ukraine were presented and the algorithm of providing insurance protection by insurance companies for coronavirus in Ukraine was proposed.

Conclusions. After analyzing all the material presented in the article, we can identify a number of positive aspects of concluding health insurance contracts against coronavirus:

- reduction of the financial burden on the patient, as significant costs of the disease have a negative impact on the financial situation of the patient, who is forced to spend large sums on testing and payment for treatment of coronavirus;
- the concluded insurance contract gives confidence in financial support and material compensation of losses;
- obtaining the necessary timely medical care to the insured, etc.

At the present stage of development, the main cause of the unstable economic environment is the coronavirus pandemic, namely the introduction of quarantine in Ukraine, which has significantly affected the business, industry, transport, banks, insurance companies and more. This is confirmed by current statistics on the spread of coronavirus in some countries. Therefore, it should be noted that today there is a growing demand for health insurance in case of coronavirus infection. Many Ukrainian insurance companies offer health insurance contracts in case of coronavirus infection. Employers, taking care of the health of their employees, enter into such agreements, which also has positive aspects for insurers - the ability to provide relevant insurance services and make a profit. For individuals, COVID-19 insurance helps to obtain social protection and reduce the financial burden on the insured.
